

Cybersecurity Brief Website Project Report

Submitted By: Jaspreet Kaur
Course: Python (NIELIT)

Introduction

Cybersecurity protects computers, networks, and data from cyber attacks. This project explains cybersecurity basics and online safety.

Objectives

- Create a website using HTML and CSS.
- Spread cybersecurity awareness.
- Explain cyber threats and safety tips.

Technologies Used

HTML5, CSS3, GitHub Pages.

Features

Home page, cyber threats, safety tips, responsive design.

Common Threats

Phishing, Malware, Ransomware, Identity Theft, Password Attacks.

Safety Tips

Use strong passwords, enable 2FA, update software, avoid unknown links, use antivirus, back up data.

Conclusion

This project demonstrates a simple cybersecurity awareness website and improves web development skills.
